Handle concept:

The handle design develops from a representation of active human figures. Poised and dynamic, the figures appear to balance and inter-connect to form a vertical column. The actions of diving, lifting, balancing, throwing and landing are implied, then as the poses progress to the top of the column a winning stance is apparent. The design represents growth, mutual support, strength and success.

LEVEL THREE

The description:

The dimensions of the proposed handles will be 500mm long x 70mm wide and 40mm deep. This size considers the scale of the doors and provides standard clearance for grasping.

Constructed in cast AA601 marine grade aluminium this material is strong and suitable for high use conditions and provides low maintenance capability. This colour metal is in keeping with the aluminium door frames and the light, bright emphasis of the interior. The finish will contrast polished areas with matt, utilising this technique to enhance the form rather than the surface of the objects.

Aluminium is suitable for the budget indicated.
